

## Student Testimonials

Here are some of the ways students are benefiting from the iPads in the classroom!

*The iPads have made it substantially easier to communicate with teachers through both apps and email while at home for extra help, but there are also so many apps that can assist you as well as the Internet. More research based projects have become available due to our access of the Internet 24/7. With apps such as Edmodo we have been able to carry out more class discussions than what is available within a 70 minute class period, because of the ability to create a current feed of comments for an entire class which has raised class participation of non heard students as well as has allowed more ideas to be spread*

- Morgan Wells, student

*The iPads have undoubtedly made school and homework a lot easier. Now, I'm able to efficiently carry out my tasks while concurrently having my own 'personal organizer' (if you will): the iPad. I love them.*

- Blake Guinn, student

*The iPads have helped improve the learning experience I have had in every class. I feel like I am more capable of designing intriguing presentations and projects with the use of our new technology. Sharing assignments with my peers is also much easier, which helps tremendously in group work. If used correctly, technology such as iPads could increase the efficiency of education many times. I will admit I had my concerns and speculations as to how the iPads would affect school, and I am pleased to conclude that I feel much better off with the help of technology*

- Sam Hayes, student

*The iPads have really cut down on the extra work. We don't have to worry about carrying huge textbooks to all of our classes or sorting through weeks of assignments and tests to find one paper. They also give us a way to communicate with our teachers outside of school, as well as a way to make up work if we miss a day or two of school*

- Kenny Rusk, student

*I like the iPad initiative because it allows me to have almost everything that I need in one place. I have much less to carry home, and all of my notes are able to be organized in Notability. Notability and Pages are probably the most helpful apps. I also like having the electronic library for pleasure-reading books. It also helps give students some added responsibility and experience with electronics.*

- Emily Lewis, student
